

The PANDA physics program at FAIR-GSI

Bruno El Bennich, Universidade do Cruzeiro do Sul

I will give an overview of the forthcoming PANDA experiment at the *Facility for Antiproton and Ion Research* (FAIR-GSI), a new international accelerator facility for the research with antiprotons and ions, currently being built by the GSI *Helmholtzzentrum für Schwerionenforschung in Darmstadt*, Germany, PANDA is one of FAIRs key experiments and exclusively dedicated to the study of Quantum Chromodynamics. I will highlight the four main areas of PANDA: Hadron Spectroscopy, Nucleon Structure, Hadrons in Matter, Hypernuclei.
